

Build it!

This is a game for pairs. You will need four interlocking plastic cubes per person.

- Partners sit back to back.
- One partner builds a solid with four cubes and then describes it to the other.
- The other partner has to build a copy of the solid without seeing the original.

Variations

- Make the challenge easier or harder by decreasing or increasing the number of cubes.
- Add (or remove) the condition that the duplicate must have the same colours as the original.
- Set a time limit – one minute to produce a four-cube model results in a fast-paced (and usually quite loud!) discussion.
