Mathematics test

Paper 1

Calculator not allowed

Please read this page, but do not open the booklet until your teacher tells you to start. Write your name and the name of your school in the spaces below. If you have been given a pupil number, write that also.

First name __________________________
Last name __________________________
School _____________________________

Pupil number _______________________

Remember

- The test is 1 hour long.
- You must not use a calculator for any question in this test.
- You will need: pen, pencil, rubber and a ruler.
- Some formulae you might need are on page 2.
- This test starts with easier questions.
- Try to answer all the questions.
- Write all your answers and working on the test paper – do not use any rough paper.
- Check your work carefully.
- Ask your teacher if you are not sure what to do.

For marker’s use only

Total marks ___
### Instructions

**Answers**
This means write down your answer or show your working and write down your answer.

**Calculators**
You must not use a calculator to answer any question in this test.

### Formulae
You might need to use these formulae.

#### Trapezium
![Trapezium Diagram](image)

Area = \( \frac{(a + b)}{2} \times h \)

#### Prism
![Prism Diagram](image)

Volume = area of cross-section \( \times \) length
1. There are **60 pupils** in a school.  
6 of these pupils wear glasses.

(a) The pie chart is not drawn accurately.  
What should the angles be?  
Show your working.

(b) Exactly half of the 60 pupils in the school are boys.  
From this information, what **percentage of boys** in this school **wear glasses**?  
Tick (✓) the correct box below.

- 5%
- 6%
- 10%
- 20%
- 50%
- not possible to tell
2. Ali, Barry and Cindy each have a bag of counters. They do not know how many counters are in each bag. They know that

Barry has **two more** counters than Ali.
Cindy has **four times as many** counters as Ali.

(a) Ali calls the number of counters in her bag **a**

Write **expressions using a** to show the number of counters in Barry’s bag and in Cindy’s bag.

(b) Barry calls the number of counters in his bag **b**

Write **expressions using b** to show the number of counters in Ali’s bag and in Cindy’s bag.
(c) Cindy calls the number of counters in her bag $c$

Ali’s bag  Barry’s bag  Cindy’s bag

Which of the expressions below shows the number of counters in Barry’s bag?
Circle the correct one.

- $4c + 2$
- $4c - 2$
- $\frac{c}{4} + 2$

- $\frac{c}{4} - 2$
- $\frac{c + 2}{4}$
- $\frac{c - 2}{4}$

1 mark
3. The diagram shows two isosceles triangles inside a parallelogram.

(a) On the diagram, mark another angle that is 75°

Label it 75°

(b) Calculate the size of the angle marked $k$

Show your working.
Now look at the triangle drawn on the straight line PQ

(c) Write $x$ in terms of $y$

(d) Now write $x$ in terms of $t$ and $w$

(e) Use your answers to parts (c) and (d) to show that $y = t + w$
4. Here are three number cards. The numbers are hidden.

The mode of the three numbers is 5
The mean of the three numbers is 8

What are the three numbers?
Show your working.

5. On a farm 80 sheep gave birth.

30% of the sheep gave birth to two lambs.
The rest of the sheep gave birth to just one lamb.

In total, how many lambs were born?
Show your working.
6. Two parts of this square design are shaded black.
Two parts are shaded grey.

Show that the ratio of black to grey is $5 : 3$
7. (a) Solve this equation.

\[ 7 + 5k = 8k + 1 \]

\[ k = \ldots \ldots \ldots \ldots \ldots \]

1 mark

(b) Solve these equations. Show your working.

\[ 10y + 23 = 4y + 26 \]

\[ y = \ldots \ldots \ldots \ldots \ldots \]

2 marks

\[ \frac{3(2y + 4)}{14} = 1 \]

\[ y = \ldots \ldots \ldots \ldots \ldots \]

2 marks
8. (a) Look at these numbers.

Which is the largest?

Which is equal to $9^2$?

(b) Which two of the numbers below are not square numbers?

....... and ........

1 mark
9. (a) \( m \) is an odd number.

Which of the numbers below must be even, and which must be odd?

Write ‘odd’ or ‘even’ under each one.

<table>
<thead>
<tr>
<th>( 2m )</th>
<th>( m^2 )</th>
<th>( 3m - 1 )</th>
<th>( (m - 1)(m + 1) )</th>
</tr>
</thead>
</table>

(b) \( m \) is an odd number.

Is the number \( \frac{m+1}{2} \) odd, or even, or is it not possible to tell?

Tick (✔) the correct box.

odd [ ] even [ ] not possible to tell [ ]

Explain your answer.
10. (a) Alan has a guessing game on his computer.
He estimates that the probability of winning each game is 0.35.

Alan decides to play 20 of these games.
How many of these games should he expect to win?

(b) Sue played the same computer game.
She won 12 of the games she played, and so
she estimated the probability of winning each game to be 0.4.
How many games did Sue play?
Show your working.

(c) The manufacturers of another guessing game claim that the probability of
winning each game is 0.65.

Karen plays this game 200 times and wins 124 times.
She says: ‘The manufacturers must be wrong’.

Do you agree with her? Tick (✓) Yes or No.

Yes ☐ No ☐

Explain your answer.
11. Here are six different equations, labelled A to F

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>$y = 3x - 4$</td>
</tr>
<tr>
<td>B</td>
<td>$y = 4$</td>
</tr>
<tr>
<td>C</td>
<td>$x = -5$</td>
</tr>
<tr>
<td>D</td>
<td>$x + y = 10$</td>
</tr>
<tr>
<td>E</td>
<td>$y = 2x + 1$</td>
</tr>
<tr>
<td>F</td>
<td>$y = x^2$</td>
</tr>
</tbody>
</table>

Think about the graphs of these equations.

(a) Which graph goes through the point $(0, 0)$?

(b) Which graph is **parallel** to the $y$-axis?

(c) Which graph is **not** a **straight line**?

(d) Which **two** graphs pass through the point $(3, 7)$?
(e) The diagram shows the graph of the equation \( y = 4 - x^2 \)

What are the coordinates of the points where the graph of this equation meets the graph of equation E?

\[ (\quad, \quad) \text{ and } (\quad, \quad) \]

3 marks
12. Equations may have different numbers of solutions.

For example: \( x + 2 = 7 \) has only one solution, \( x = 5 \)

but \( x + 1 + 2 = x + 3 \) is true for all values of \( x \)

Tick (✓) the correct box for each algebraic statement below.

<table>
<thead>
<tr>
<th>Equation</th>
<th>Correct for no values of ( x )</th>
<th>Correct for one value of ( x )</th>
<th>Correct for two values of ( x )</th>
<th>Correct for all values of ( x )</th>
</tr>
</thead>
<tbody>
<tr>
<td>( 3x + 7 = 8 )</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>( 3(x + 1) = 3x + 3 )</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>( x + 3 = x - 3 )</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>( 5 + x = 5 - x )</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>( x^2 = 9 )</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

3 marks
13. The diagram shows five triangles. All lengths are in centimetres.

(a) Write the letters of two triangles that are **congruent** to each other.

\[
\begin{align*}
\text{B} & \quad \text{and} \quad \text{D} \\
\end{align*}
\]

Explain how you know they are congruent.

(b) Write the letters of two triangles that are mathematically **similar** to each other but not congruent.

\[
\begin{align*}
\text{C} & \quad \text{and} \quad \text{E} \\
\end{align*}
\]

Explain how you know they are mathematically similar.
14. The first ‘Thomas the Tank Engine’ stories were written in 1945. In the 1980s, the stories were rewritten.

The cumulative frequency graph shows the numbers of words per sentence for one of the stories.
There are **58 sentences** in the old version.
There are **68 sentences** in the new version.

(a) Estimate the **median** number of words per sentence in the old version and in the new version.

Show your method on the graph.

(b) What can you tell from the data about the number of words per sentence in the old version and in the new version?

(c) Estimate the percentage of sentences in the **old** version that had more than 12 words per sentence.

Show your working.
15. (a) A fair coin is thrown. When it lands it shows heads or tails.

Game: Throw the coin three times.
Player A wins one point each time the coin shows a head.
Player B wins one point each time the coin shows a tail.

Show that the probability that player A scores three points is $\frac{1}{8}$

(b) What is the probability that player B scores exactly two points?
Show your working.
16. \( \frac{1}{2500} \) is equal to \( 0.0004 \)

(a) Write 0.0004 in standard form.

(b) Write \( \frac{1}{25000} \) in standard form.

(c) Work out \( \frac{1}{2500} + \frac{1}{25000} \)

Show your working, and write your answer in standard form.
END OF TEST
